Creating a spreadsheet

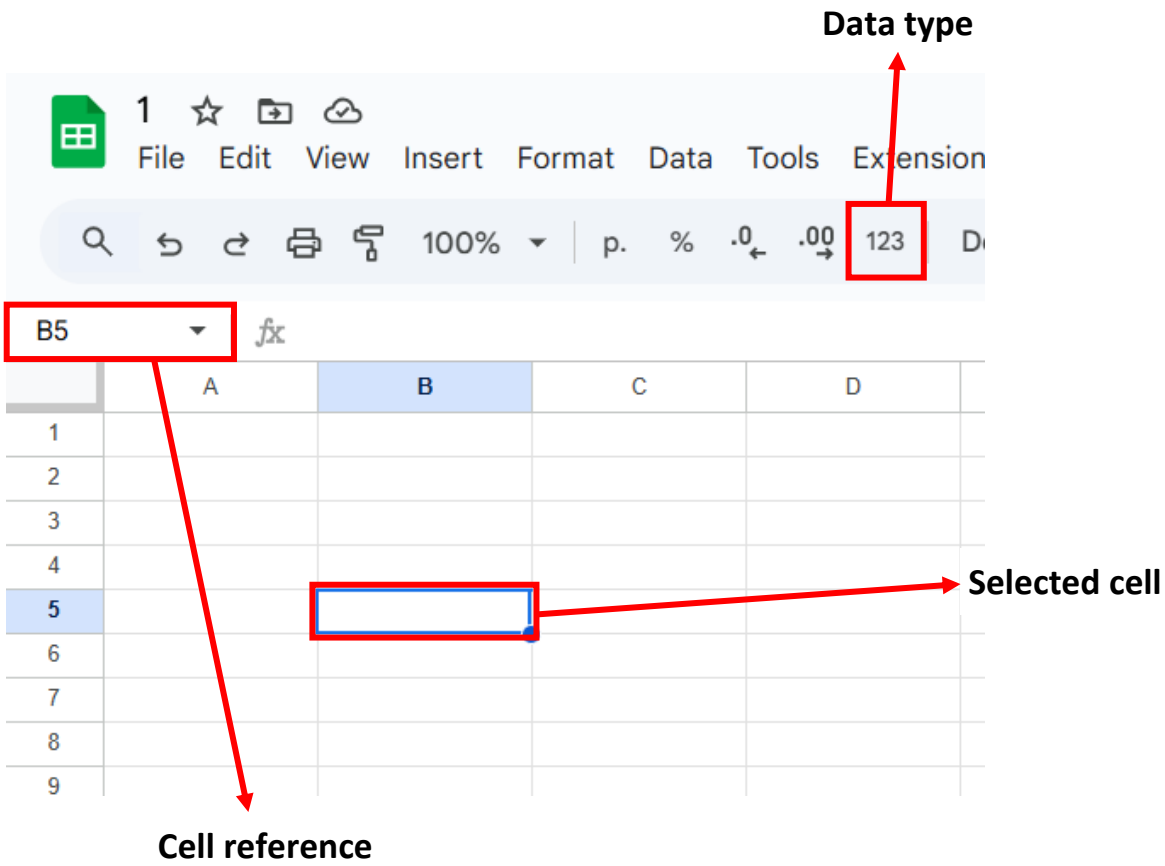
Good morning, everyone! My name is Iryna and I will be your teacher today. Last lesson, you started learning about spreadsheets.

1. **Let's remember how to add data into a spreadsheet.**
   Who wants to answer?

Ответ: To add data to a spreadsheet, we select a cell and click on it, then type the information you want. After that, we press Enter to move to the next cell.
Next question

2. **Does every cell in a spreadsheet have a unique address?**
   And Where can we find the cell reference?

Each row has a unique number and each column has a unique letter. Unique means it is not like anything else, and that there is only one of them – like you!



To make a calculation in a spreadsheet, we need to use a formula. Spreadsheet formula combine cell references with arithmetic operators.

3. **Who can tell me what simple operators you can use for calculations in spreadsheets?**

arithmetic operators are the symbols we use to do maths, such as + (plus), – (minus), * (multiply), / (divide).

4. **In column C of this table, you can see the results. Which formulas do you need in these rows?**

	A	B	C
1			
2	1	10	11
3	5	2	3
4	3	2	6
5	6	2	3
6			

Remember, a formula must start with an equal sign.
You can see the formulas in the next table.

	A	B	C
1			
2	1	10	=A2+B2
3	5	2	=A3-B3
4	3	2	=A4*B4
5	6	2	=A5/B5
6			

Last question

5. **How to use built-in functions including SUM and AVERAGE?**

First, we select a cell, then type an equal sign, a function name, and select the range of cells.

For example:
=SUM(A1:A5) adds the numbers from cell A1 to A5.
=AVERAGE(B1:B4) calculates the average of the values in cells B1 to B4.

	A	B
1		
2	1	10
3	5	2
4	3	2
5	6	2
6	=SUM(A2:A5)	=AVERAGE(B2:B5)

The formula is written in a cell that is not used in the calculation.
Remember to use a colon in the range

	A	B
1		
2	1	10
3	5	2
4	3	2
5	6	2
6	15	4

Now it's time to work in groups. (Please, work in groups of four.)

TASK 1

Identify the incorrect formulas in the following list and write them correctly.

	A	B
1	**Formula**	**Corrected**
2	= SUMB5:B10	
3	=B5;B10	
4	=SUM(B5:B10)	
5	AVERAGE(B5:B10)	
6	=AVERAGE(B5-B10)	
7	=B5/B10	
8	B5*B10	
9	=AVERAGE(B5B10)	
10	SUM=B5:B10	

TASK 2

Write a formula to calculate how much it would cost to buy <u>12</u> of each item listed below.

	A	B	C	D
1	**Item**	**Sales**	**Total sold**	**Price per item**
2	T-shirt	$48,00	6	
3	Shorts	$24,00	2	
4	Socks	$129,00	43	
5	Shoes	$40,00	1	
6	Hat	$97,86	14	
7				
8				
9				
10				

Planning a spreadsheet

When you want to create a spreadsheet, you need to carefully plan what it will look like and what you want to do in it. You also need to think about the formulas and the type of data in the cells.

When you create a spreadsheet, ask yourself these questions:

1. What data do I want to use?
2. What headings will the data have?
3. How will I organise the data so that it is easy to understand?
4. What format will the data be in?
5. What calculations do I want to do on the data?
6. What formulas or functions can I use to perform these calculations?

Let's create a "Picnic" spreadsheet.

1. Food, drink, number of items, cost for one serving / price per item, total
2. -//-
3. table
4.
5. Total, grand total, average cost for each person
6. *, sum, average
7. Let's add all data to a spreadsheet.

	A	B	C	D
1	food+drink	number of items	price per item	total
2	cake	0	0,85	0
3	chocolate	7	0,43	3,01
4	fruit salad	6	1,87	11,22
5	french fries	9	0,72	6,48
6	crackers	8	0,61	4,88
7	water	4	0	0
8	juice	5	0,81	4,05
9	milk	1	0,41	0,41
10				
11			grand total	30,05
12				
13			cost per person	3,75625
14				

Version 1

🎪 Задание 2: Школьная ярмарка / Task 2: School Fair

Описание / Description:

У каждой команды — палатка на школьной ярмарке. Подсчитайте выручку и среднюю цену товара.

Товар / Item	Цена / Price	Продано / Sold	Выручка / Revenue
Браслеты / Bracelets			=B2*C2
Открытки / Cards			=B3*C3
Сладости / Sweets			=B4*C4
Игрушки / Toys			=B5*C5
Общая выручка / Total revenue:			=SUM(D2:D5)
Средняя цена / Average price:			=AVERAGE(B2:B5)

Version 2

🎒 Задание 4: Поход / Task 4: Hiking Trip

Описание / Description:

Группа собирается в поход. Подсчитайте общий вес рюкзаков и среднюю массу предметов.

Предмет / Item	Масса / Weight (kg)	Кол-во / Quantity	Всего / Total weight
Палатка / Tent			=B2*C2
Вода / Water			=B3*C3
Продукты / Food			=B4*C4
Одежда / Clothes			=B5*C5
Общий вес / Total weight:			=SUM(D2:D5)
Средний вес / Average item weight:			=AVERAGE(B2:B5)
